#### 1 Overview

This document contains information for the DP83TC812S-Q1 and DP83TC812R-Q1 to aid in a functional safety system design. Information provided are:

- Functional safety failure in time (FIT) rates of the semiconductor component estimated by the application of industry reliability standards
- Component failure modes and their distribution (FMD) based on the primary function of the device
- Pin failure mode analysis (pin FMA)

Figure 1-1 shows the device functional block diagram for reference.

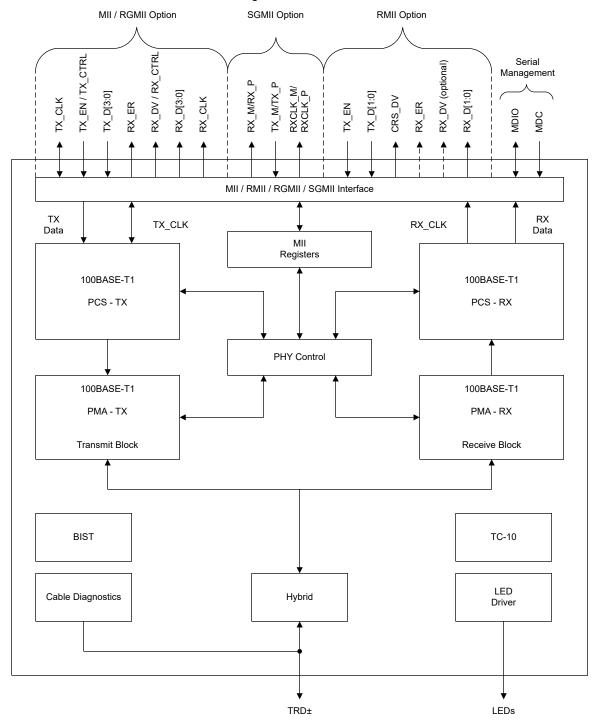

Figure 1-1. Functional Block Diagram

www.ti.com Overview

The DP83TC812S-Q1 and DP83TC812R-Q1 were developed using a quality-managed development process, but were not developed in accordance with the IEC 61508 or ISO 26262 standards.

# 2 Functional Safety Failure In Time (FIT) Rates

This section provides functional safety failure in time (FIT) rates for the DP83TC812S-Q1 and DP83TC812R-Q1 based on two different industry-wide used reliability standards:

- Table 2-1 provides FIT rates based on IEC TR 62380 / ISO 26262 part 11
- Table 2-2 provides FIT rates based on the Siemens Norm SN 29500-2

Table 2-1. Component Failure Rates per IEC TR 62380 / ISO 26262 Part 11

FIT IEC TR 62380 / ISO 26262	FIT (Failures Per 10 <sup>9</sup> Hours)
Total component FIT rate	25
Die FIT rate	3
Package FIT rate	22

The failure rate and mission profile information in Table 2-1 comes from the reliability data handbook IEC TR 62380 / ISO 26262 part 11:

Mission profile: Motor control from table 11

Power dissipation: 290 mW

Climate type: World-wide Table 8Package factor (lambda 3): Table 17b

Substrate material: FR4EOS FIT rate assumed: 0 FIT

Table 2-2. Component Failure Rates per Siemens Norm SN 29500-2

Table	Category	Reference FIT Rate	Reference Virtual T <sub>J</sub>
5	CMOS, BICMOS Digital, analog / mixed	70 FIT	70°C

The reference FIT rate and reference virtual  $T_J$  (junction temperature) in Table 2-2 come from the Siemens Norm SN 29500-2 tables 1 through 5. Failure rates under operating conditions are calculated from the reference failure rate and virtual junction temperature using conversion information in SN 29500-2 section 4.

# 3 Failure Mode Distribution (FMD)

The failure mode distribution estimation for the DP83TC812S-Q1 and DP83TC812R-Q1 in Table 3-1 comes from the combination of common failure modes listed in standards such as IEC 61508 and ISO 26262, the ratio of sub-circuit function size and complexity, and from best engineering judgment.

The failure modes listed in this section reflect random failure events and do not include failures resulting from misuse or overstress.

Table 3-1. Die Failure Modes and Distribution

Die Failure Modes	Failure Mode Distribution (%)
Fault in MDI transmitter causing IEEE spec compliance issues	8
Fault in MDI transmitter causing high RF emissions	4
Fault in MDI receiver causing poor-link quality/link-loss	8
Fault in internal power circuits causing poor link quality and higher power consumption	12
Fault in internal clock circuits causing IEEE compliance issues and poor link-quality	8
Fault in GPIO causing higher RF emissions	8
Fault in GPIO causing Rgmii/JEDEC/Datasheet spec violation	8
Fault in ESD on MDI making IEC ESD performance lower than 8KV	4
Fault in ESD on GPIOs making CDM performance lower than 2KV.	4
Digital core has stuck or transient faults causing link-up or PCS faults	36

## 4 Pin Failure Mode Analysis (Pin FMA) DP83TC812S-Q1

This section provides a failure mode analysis (FMA) for the pins of the DP83TC812S-Q1. The failure modes covered in this document include the typical pin-by-pin failure scenarios:

- Pin short-circuited to ground (see Table 4-2)
- Pin open-circuited (see Table 4-3)
- Pin short-circuited to an adjacent pin (see Table 4-4)
- Pin short-circuited to supply (see Table 4-5, Table 4-6, Table 4-7, and Table 4-8).

Table 4-2 through Table 4-8 also indicate how these pin conditions can affect the device as per the failure effects classification in Table 4-1.

**Table 4-1. TI Classification of Failure Effects** 

Class Failure Effects			
Α	A Potential device damage that affects functionality.		
B No device damage, but loss of functionality.
