## **Co<sup>60</sup> Irradiation of Texas Instruments**

### **TI- DAC5675 14-Bit DAC**

**at The Salk Institute, San Diego, CA  
March 24-25, 2006**

On March 24-25, 2006, ICS irradiated 25 TI-DAC5675 14-Bit DAC ICs (Log 1463) manufactured by Texas Instruments, Sherman, Texas. The Texas Instruments purchase order number is 4511288294. The ICS Task number is 749. The radiation test procedure is RTP 645.

The TI- DAC5675 14-Bit DAC were irradiated per RTP 645, The total dose exposures were 25, 50, 75, 100 & 150krads(Si), one level for each group of five devices (serialized) at a dose rate of 2.53rad(Si)/second [9108 rads(Si)/hour]. The TI- DAC5675 14-Bit DAC were placed in a customer supplied burn-in/radiation bias board. The bias board was set to the distance of 60cm from the Co<sup>60</sup> source. This provided for a dose rate of 2.53rads(Si)/second to each device.

The TI- DAC5675 14-Bit DAC were positioned to uniformly expose the entire Bias Board area. The total irradiation time for 150krad(Si) was 16.5 hours.

**NOTE:** All devices were immediately placed in a chilled Dry Ice environment when they ended their respective exposure periods.

The irradiator was the Shepherd Gammabeam 150-C, room source at The Salk Institute, La Jolla, California.

The dose rate calculation is based on the Salk Institute dose rate vs. distance calibration chart. Their source is calibrated by J.L. Shepherd & Associates and is traceable to NIST.

The setup consisted of:

- 25 pieces plus 23 spare, TI- DAC5675 14-Bit DAC
- 1 Bias board (TI supplied 50 position burn in board)
- 1 Fluke Model 8600A DMM Calib # BF1178. Calibrated 2/28/06, due 2/28/07.
- 1 Fluke Model 8600A DMM Calib # BF1174. Calibrated 2/28/06, due 2/28/07.
- 1 HP DC Power Supply Model 6289A.
- 1 Shepherd Gammabeam 150-C.

The bias board voltages and currents were monitored and recorded at the start and end of exposure period. See Exposure Activity Log for details. All test equipment is property of ICS with the exception of the Shepherd Gammabeam 150-C and the DUTs.

The exposure groups by serial # and exposure level are as follows:

25krads (Si) TID —S.N. 1, 2, 3, 4, & 5.

50krads(Si) TID —S.N. 6, 7, 8, 9, & 10.

75krads(Si) TID —S.N. 11, 12, 13, 14, & 15.

100krads(Si) TID —S.N. 16, 17, 18, 19, & 20.

150krads(Si) TID —S.N. 21, 22, 23, 24, & 25.

No unusual events were observed during the radiation exposure of the TI- DAC5675 14-Bit DAC. Initially, the 3.6 volt supply was 318mA for the bias board (total for all devices on the board). The average device current was 12.7mA per device. After the 150krad(Si) irradiation was complete the average current per device was 10mA.

If you have any questions, please contact me directly.

ICS RADIATION TECHNOLOGIES, INC.

Armando R.V. Dantas

Vice President Operations

March 27, 2006

**Device Type:** **DAC5675, 14 Bit, 400 MSPS, Digital-to-Analog Converter**

**Manufacturer:** TI

**Lot No:** Wafer# **Date Code:**

**Package Type:** 48 Pin HTQFP

**No. of Devices Supplied:** 48

**No. of Devices to be tested:** 5 at each Dose Level + 23 spares

=====

**RADIATION CONDITIONS:** MIL STD 883E, Test Method 1019.4

**Facility:** Salk Institute, La Jolla, California

Gammabeam 150-C, Co60 **Energy:** 1.25 MeV

Total Dose krad(Si)	25	50	75	100	150	ANNEAL 168hr 100°C
------------------------	----	----	----	-----	-----	-----------------------

Dose Rate rad(Si)/s	2.53 [151.6rad(Si)/minute]
------------------------	----------------------------

**BIAS CONDITIONS DURING IRRADIATION:**

Customer supplied bias board

The following bias should be made to the board as labeled:

3.6V terminal to 3.6V

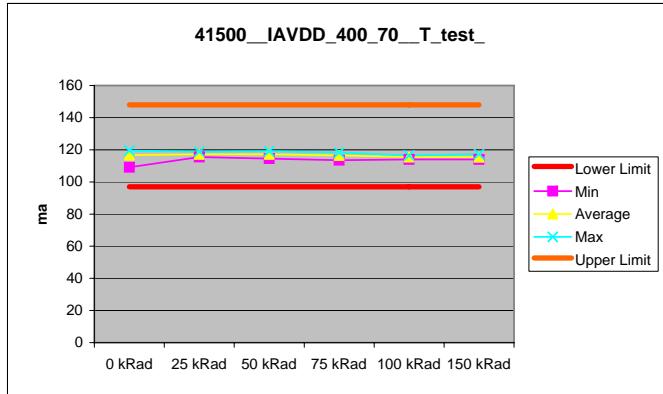

GND terminal to Ground

Anneal to be conducted by customer.

After the final irradiation, all devices will be packed in Dry Ice and shipped overnight express.
